

C. Mark Smith Ph.D., M.S.

Dr. C. Mark Smith is the Director of the Massachusetts Department of Environmental Protection (MassDEP) Office of Research and Standards (ORS) and manages the science program at the Wall Experiment Station (WES), the state environmental laboratory. In these capacities he directs MassDEP's toxicology, risk assessment, emerging contaminants and environmental research programs, including efforts to assess risks and establish state policies for a range of pollutants ranging from PFAS to pathogens. He and his group develop standards and guidelines, and implement risk assessment guidance and policies for hazardous waste sites, drinking water, air pollutants and solid wastes, as well as risk communication materials and analytical approaches to assess contaminants in the environment. Dr. Smith earned his Ph.D. in the field of Pharmacology/Toxicology from Harvard University and an M.S. in Environmental Management from the Harvard School of Public Health. He has published in the areas of environmental policy, molecular toxicology and risk assessment. When not at work he enjoys hiking, kayaking, fly fishing, home-brewing and being with family and friends.
